

How to Grow a Potato in a Jar

1

Choose a potato that has eyes (small sprouts).

2

Use 3 toothpicks to hold the potato on the jar. The bottom touches the water.

3

Add water. Change the water every 2–3 days.

4

Put the jar in a sunny place. Wait and watch it grow!

5

When the plant is 10–15 cm tall, add soil to the jar. Cover the potato, but not the leaves.

6

After some weeks, carefully take the potatoes from the soil. Enjoy! 

Water. Sun. Patience. Fresh potatoes!
